

ABSTRACT

A system and method provides, on a web page provided by a host server, content that resides on a server that is remote from the host server over a distributed computer system. A client computer requests and downloads a web page from the host server to the client computer, at which the requested web page is parsed. In response to an instruction parsed from the requested web page, the client computer downloads executable code is downloaded from a remote server specified in the instruction, and the client computer executes the code. Responsively to the executable code, content is downloaded from the remote server to the client computer and displayed on the requested web page.
